

For Immediate Release

ClearStar.net Transforms Background Information Reports with ClearStar.net Interactive Reporting™

CUMMING (ATLANTA), GA – September 10, 2007 – ClearStar.net, a leading information services provider for the background, employment and tenant screening industry, announced today the release of ClearStar.net Interactive Reporting™. The new report framework makes the interpretation of complex information easy and formats results to meet the specific needs of the client.

“Now we can accept supplier data in any format and present it in a consistent and easy to interpret report that is driven by customer specific business logic,” explained Ken Dawson, CIO of ClearStar.net. “By turning the report into a business tool, we have taken the next step in driving more value from the raw data by making it an active participant in the report instead of just words on the page.”

Interactive Reporting is based on the W3C® XSL-FO standard and can accept data in any structure the supplier provides – including common industry standards like HR-XML and MISMO (credit data), supplier-specific structures and plain text.

The framework also provides greater flexibility in the presentation of complex data by allowing advanced formatting features including columns, tables, fonts and incorporation of graphic images as well as page and report headers and footers.

“Clearly communicating background information has been difficult because the information in reports comes in various formats and structures that are not always consistent or compatible,” continued Dawson. “For this release we focused entirely on improving the customer experience and are pleased to unveil a fully indexable, highly customizable and completely intuitive report.”

The reports are provided as Adobe® PDF documents with full support for bookmarks and hyperlinks, allowing for the inclusion of a table of contents for each report. The hyperlinks and bookmarks provide users with quick and easy ways to navigate to the desired information in the document.

Interactive Reporting is built on a highly scalable rendering engine to ensure the highest levels of performance and reliability while supporting the growing demands for flexibility and customization of channel partners.

“With report generation now in excess of 1 million per month, ClearStar.net is playing a critical role in delivering background information for thousands of organizations,” concluded R.J. Vale, CEO of ClearStar.net. “Creating this more robust report engine is central to our strategy for meeting the dynamic growth of our client’s business by providing them with reliable solutions that help put their customer first.”

About ClearStar.net

ClearStar.net is a trusted provider of strategic services and decision making information for background screening firms. ClearStar.net’s proven technology infrastructure is HR-XML Consortium certified and sets the foundation for a strong community of progressive, independent retailers who provide risk mitigation, employment and tenant screening services.
