

ClearStar Gateway

What it is

ClearStar Gateway is a collection of web services designed to provide businesses, suppliers, and third party software vendors the ability to integrate directly into our Screening Management Solutions™. This is a simple, but powerful method of allowing systems to talk to each other and take advantage of very complex functionality.

What you can do with it

Gateway will include all functionality normally offered through the web interface, to include administrative tasks currently performed in the day-to-day management of our Screening Management Solutions. Our clients/Business Owners can build applications to take advantage of system features to integrate with other technologies that support their business objectives, independent of direct involvement of our development team. Some of the integration projects undertaken by our Business Owners include:

- Applicant Tracking Systems
- Job Boards
- Human Resource Management Systems
- Proprietary Company Databases
- Client Relations Management Systems
- Accounting Systems
- ClearStar Suppliers (Gateway Direct)

What the benefits are

- Take control of your business by building a custom screening application for a vertical market without building the backend from scratch.
- Build applications, web sites or interfaces that are your intellectual property.
- Access thousands of services and hundreds of suppliers through a single interface.
- Take advantage of business processes that over 35,000 consumers of public records depend on every day.
- Have your customer submit/retrieve screening services from their ATS or HRMS.
- Sync up with your accounting or customer relationship management systems.
- Focus on your idea instead of re-inventing the wheel and spending time developing functionality that is already available for you to use.
- Have the ability to say YES when an RFP calls for custom development.
- Set your own pace and direction.

What the Development Team wants you to know

The initial version of Gateway provides access to Profile creation functionality including related lookup lists, Service lists, Customer configurations and data validation, and other view or list functionality related to customers, users, invoices and services. Each new version will increase the level of functionality that is available through our Screening Management Solutions. Gateway does not replace our HR-XML certified protocol. ClearStar is an active member of the HR-XML Consortium.

What the Sales Team wants you to know

ClearStar Gateway is much more than a technology offering, it is a vital part of our continuing commitment to our valued independent Business Owners to provide them with the tools they need to succeed.
